

A5. Write a HTML program to develop a static Registration Form

Do the validation for

- Password and confirm password are same.
- Firstname and lastname includes only alphabets and space
- Mobile no. contains only 10 digits and first digit starts with 6-9.[Regular expression]
- All entries are mandatory.

On clicking submit button display the message in another page as “ Dear <firstname+lastname to be shown here> , your application for <course name here> is successfully submitted with username <username here>”

<!-- A5.html -->

<!DOCTYPE html>

<html>

<head>

<script>

// Function to check whether both passwords is same or not and display the application acceptance message.

function checkPassword(form)

{

password1 = form.password1.value;

password2 = form.password2.value;

fname = form.fname.value;

lname = form.lname.value;

uname = form.uname.value;

course= form.rb3.value;

// If password not entered

if (password1 == "")

alert ("Please enter Password");

// If confirm password not entered

else if (password2 == "")

alert ("Please enter confirm password");

// If Not same return False.

else if (password1 != password2) {

alert ("\nPassword did not match: Please try again...")

return false;

}

// If same display the application acceptance message

else {

alert("Dear "+fname+" "+lname+" Your application for "+course+" is successfully submitted with Username "+uname);

return true;

}

}

</script>

</head>

```
